EXPERIENCE

Founder & Data Scientist — *AniPoint Site Research* Pittsburgh, PA | May 2026 - Present

- Founded a location intelligence consultancy for retail and service businesses and identified $1.5M+ expansion opportunities.
- Designed a revenue driver tree (traffic × capture rate × ticket price) and a margin model that turned client profit goals into break-even targets.
- Estimated the incremental revenue of new sites with observational causal inference (Double ML, causal forests) on a 12-year county panel, with robustness checks (difference-in-differences) and out-of-sample back-tests against real sites.
- Developed scenario planning (low/base/high) and Monte Carlo risk models (probability of loss, VaR, CVaR) on reproducible, tested Python workflows (150+ unit tests) that cut client report turnaround by 91%.

Senior Data Scientist — *Limetree* Dallas, TX (Remote) | September 2024 - April 2026

- Owned the funnel KPI tree linking gross lead rate (GLR) to member rate and cost per member with strategy, finance, and engineering, and validated GLR as the primary lever with a causal DAG.
- Translated financial goals into team targets with a funnel sensitivity model showing the cost-per-member target required GLR of at least 14.2%.
- Built a certified GLR definition for a new client whose data lacked key lead markers, working with data engineering to date leads by last response, credit them to campaigns, and flag broker influence.
- Developed uplift and segmentation models on millions of HIPAA-protected records, used in 87% of campaigns, cutting ad spend by $10K per campaign and moving 12% of one client's budget to its top GLR segment.
- Created an in-house experimentation and reporting platform that data science and strategy used to validate lift and to run monthly reporting, weekly analysis, Power BI ingestion, and metric monitoring.
- Found that claims and ticket complaints drove churn and added them to the churn model, then re-architected its platform on Spark and Databricks, cutting runtime by 48% and memory by 23%.

Founding Machine Learning Engineer — *eParts Services LLC* Pittsburgh, PA | September 2023 - September 2024

- As the first ML hire, defined success metrics and drift monitoring for search and pricing models, and mentored the team on ML practices.
- Shipped a regression pricing API (C#, Azure, 10,000+ daily requests) that cut false and anomalous shipping prices by 13%, reducing cost leakage and holding a stable 18% contribution margin.
- Cut search dissatisfaction by 12% and raised platform engagement by 16% with custom Elasticsearch analyzers, field boosting, and relevance tuning.

Data Scientist — *Limetree* Dallas, TX (Remote) | April 2022 - September 2023

- Raised the XGBoost GLR model's AUC-ROC 3% relative to the prior model and validated it with an A/B test. SHAP surfaced the drivers (income, age, children in the household) and uplift models isolated the creative's effect.
- Validated GLR out of sample as a leading indicator of member rate 60 days ahead ($R^2 = 0.28$). Model-driven targeting and creative changes raised gross lead rates by 18%.
- Led monthly monitoring of up to 10 production models across clients (accuracy, drift, forecast vs. actual) for leadership, and built a company-wide self-service dashboard on curated Snowflake and Databricks tables.

TECHNICAL PROJECTS

Customer LTV & Churn Survival Modeling github.com/beauvilerobed/data-science-machine-learning-lab-and-compendium

- Simulated 1M customer lifetimes with tenure-dependent churn (10%, 5%, then 2% monthly) to show the LTV = ARPU / churn identity holds only under constant churn.
- Estimated expected lifetime and LTV from the empirical survival curve ($E[T] = \int S(t)dt$), matching the simulated mean.

Mobile Game Retention A/B Test github.com/beauvilerobed/data-science-machine-learning-lab-and-compendium

- Analyzed a test moving a mobile game's first progress gate from level 30 to 40, measuring 1- and 7-day retention and rounds played.
- Set Type I/II error rates, sized samples, removed outliers with IQR, and weighed statistical against practical significance.

Medicare Claims Intelligence & Fraud Detection github.com/beauvilerobed/data-science-machine-learning-lab-and-compendium

- Built a dbt warehouse (4 staging models, 5 marts, 26 data tests) over 790K CMS claims, with tests that caught 11,253 claims missing a service date.
- Beat a seasonal-naive forecast in a 35-origin rolling backtest (MASE 0.62 vs. 1.06), reached 81% precision on planted fraud at review capacity, and built an out-of-time XGBoost risk model (SHAP, MLflow) finding 46% more high-cost members.

EDUCATION

Ph.D. in Mathematics — *University of Pittsburgh* 2017 - 2023

Dissertation: A Minimal Invariant Set, Frames, and Operators

B.S. in Mathematics — *Florida State University* 2014 - 2017

Minor: Philosophy | **GPA:** 3.90

TECHNICAL SKILLS

Causal Inference & Experimentation: A/B Testing, Experimentation Platforms, CUPED, Power Analysis, Observational Causal Methods, Double ML, Causal Forests, Difference-in-Differences, Uplift Modeling, Causal Graphs (DAGs), Robustness Checks

Modeling & Statistics: Regression, Classification, XGBoost, Time Series Forecasting, Survival Analysis, Monte Carlo Simulation, Graph Models, Multi-Metric Modeling, SHAP, Model Monitoring & Drift

Data & Tools: SQL, Python (pandas, statsmodels, scikit-learn, econml), R (survey analysis), C#, Snowflake, Databricks, Spark, dbt, Curated Tables & Data Marts, AWS, Azure, Power BI, Git

Collaboration: Cross-Functional Partnership (Product, Finance, Engineering, Strategy), Stakeholder Communication, Method Documentation, Mentoring

Metrics & Planning: KPI Frameworks, KPI / Driver Trees, Certified Metric Definitions, Leading Indicators, Consumer Product Analytics (Acquisition, Activation, Engagement, Retention, Monetization), CAC, LTV / ARPU, Contribution Margin, Scenario Analysis, Target Setting, Budget Allocation, Forecasting
